"We have used VetCT for interpretation and reporting of our MRI and CT images for over a year now and are highly impressed with the service. The online platform is quick and easy to use so we can continue our busy workload, whilst the rapid reporting turnaround time ensures we continue to provide optimal service to our clients. The reports are written by equine radiologists with a high level of clinical experience in the racing and performance horse industries with an excellent understanding of our client's needs. They are always happy to discuss cases and provide practical clinical comments to help us do the best for the horses"

Dr Ger Kelly
Fethard Equine
